Lead and Copper Sample Analysis Report

TO: Mr. KYLE EDENFIELD 1100 SECOND STREET SE COCHRAN, GA 31014	Date Collected: 9/26/2017 Time Collected: 2:31 PM Sample Collector: K. EDENFIELD Received By: DMV Date Received: 10/4/2017 Reporting Date: 12/13/2017
Sample ID: AJ70714 System: middle georgia state university WSID: 0230003 Site Number: 001	

ANALYTE	PARAMETER CODE	RESULT	UNITS	ANALYST	ANALYSIS DATE
Copper	01042	280	ug/L	MB	10/27/2017
Lead	01051	0	ug/L	MB	10/27/2017

Thank you for participating in the implementation of the "Lead and Copper Rule" as required by the US Environmental Protection Agency. The water sample you collected from your house has been analyzed for lead and copper content; the results are given above.

Lead and copper may be found in household plumbing fixtures such as service lines, pipes, solders and fluxes, and brass and bronze fixtures. Lead is found throughout the environment in the air, soil, water, and household dust, and in consumer products such as food, lead-based paint, pottery porcelain and pewter. Lead and copper enter drinking water primarily as a result of the corrosion, or wearing away of materials containing these metals. Lead can pose a significant risk to your health if too much of it enters your body. The greatest risk is to young children and pregnant women. The US EPA has established an "action level" of 15 ug/l for lead and 1300 ug/l for copper. If concentrations measured in your household water exceed these "action levels", you can minimize your exposure by:

- * "flushing" the cold water faucet until the water becomes as cold as it will get; this removes the water that has stagnated in you home plumbing over several hours;
- * using cold water for drinking or cooking;
- * not cooking with or consuming water from the hot water faucet;
- * not using hot water for making baby formula;
- * using only "lead-free" solder, fluxes, and materials in new household plumbing and repairs.

For more information on reducing lead/copper exposure around your home, the health effects and primary sources of these contaminants, please visit the EPA's website at WWW.EPA.GOV/LEAD, call the National Lead Information Center at 1-800-424-LEAD, or contact your health care provider.

For more information contact your water supplier:
